## **DETAILED ACTION**

## Election/Restriction

The variations in A, B, C and D produce patentably distinct compounds capable of independent use.

This application has been found to contain more than one invention. Therefore, restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. The instances wherein A, B, C or D are carbon, classified in class 548, subclass 262.2+.
- II. The instances wherein A or D is nitrogen and A,B,C are nitrogen, classified in class 546, subclass 272.4+.
- III. The instances wherein C is nitrogen and A, B, C are carbon, classified in class 546, subclass 268.1+.
- IV. The instances wherein B or D is nitrogen and A, C are carbon, classified in class 546, subclass 268.4+.
- V. The instances wherein C and D are nitrogen and A, B are carbon, classified in class 544, subclass 238+.
- VI. The instances wherein A and D are nitrogen and B, C are carbon, classified in class 544, subclass 298+.
- VII. Claim 3, drawn to compounds of formula 4, classified in classes 544,546 and 548, various subclasses.
- VIII. Claims 4-7, drawn to multiple processes of preparing, classified in classes 544, 546 and 548, various subclasses.

Art Unit: 1625

IX. Claim 8, drawn to a process of preparing, classified in classes 544, 546 and 548, various subclasses.

Claims 9-11 are drawn to nonstatutory subject matter because they are drafted in terms of use and hence cannot be grouped at this time. In the event that applicants amend the claims, they will be grouped accordingly.

These inventions are distinct, each from the other because of the following reasons:

These distinct inventions have acquired separate status in the art, will support separate patents, and will require different fields of search for the respective inventions. Accordingly, restriction for examination purposes as indicated is considered proper; 35 U.S.C. 121; 37 CFR 1.141; 37 CFR 1.142.

Inventions I-VI are drawn to patentably distinct compounds.

"A Markush-type claim is directed to "independent and distinct inventions", if two or more of its members are so unrelated and diverse that a prior art reference anticipating the claim with respect to one of the members would not render the claim obvious under 35 U.S.C. 103 with respect to the other member(s)". In re Weber, 198 USPQ 330, footnote 3.

A reference to a pyrimidine here would not be a reference to a pyridine. When one writes out the entire compound, as a whole, one arrives at patentably distinct heterocyclic compounds, along the lines indicated in the Groups of the first page of this action.

Distinct, independent, heterocyclic nuclei.

Independent means the compound is capable of being utilized alone, not in combination with other compounds listed in the Markush expression; MPEP 802.01.

Art Unit: 1625

If the members are so diverse that they will support separate patents, *i.e.*, a reference for one would not constitute a reference for the other, then restriction is considered proper. MPEP 2173.05(h).

Inventions I-VII and VII, IX are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products as claimed can be used in materially different processes as evidenced by applicants' own claims and specification.

Inventions I-VI and VII are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as herbicides, fungicides, bactericides, photographic antifogging agents, etc., and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Group VII will be restricted to the same extent as the compounds of Group I under 35 U.S.C. 121. In the event of an election of Group VII, applicants are requested to elect a single compound.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Claims 1 and 2 will be examined to the extent readable on the elected compounds.

In, <u>In re Weber</u>, 198 USPQ 332, <u>In re Hengehold</u>, 169 USPQ 473, was noted for the proposition that as long as applicants have maintained the right (as they do here) to file the non-elected subject matter in divisional applications, then restriction is proper, as to that point.

Applicant may file the divisional subject matter noted in divisional applications.

If applicant wishes a generic expression of the elected invention the claims here need be amended to reflect that election.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia L. Morris whose telephone number is (571) 272-0688. The examiner can normally be reached on Mondays through Fridays.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
